

Unlock the Power of Connection

With PreVantage ConnectedCare, lipid panel and glucose test results can be so much more than numbers.

They can be keys that unlock doors to more meaningful connections between healthcare teams, patients, and their data.

That's good for health outcomes, and good for business.

In a joint study conducted by Rimidi and Desert Oasis Healthcare, preliminary results indicated that providers whose patients used Rimidi saw an average A1C reduction of 2.79%, versus a 0.83% reduction in the group that received PCP care without Rimidi over a 12-week period.¹

The Power of PreVantage ConnectedCare

PreVantage ConnectedCare connects the goals of the healthcare system and the healthcare provider, allowing providers to drive engagement, adherence, and improved health outcomes for both the individual and the population as a whole.

7.6

PreVantage ConnectedCare is designed to enhance, not interrupt clinical workflow. It is integrated with leading EHR systems and can be accessed on laptops, tablets, and smartphones.

Engage patients with chronic diseases

- Efficiently manage population health outcomes while controlling costs
- Deliver on MIPS population health improvement activities
- Create reports on key quality metrics in real-time
- SMART on FHIR enabled

Leverage data to enhance clinical outcomes

- Target treatment decisions to individual patient needs
- · Create a dynamic care plan with each encounter
- Recommend virtual health education including DSME-S
- · Remotely monitor patient follow-up
- Promote efficient monitoring of patients with chronic conditions like diabetes
- · Easily identify gaps in care
- Easily access reports with one touch
- Improve workflow efficiency

Gain more control over health outcomes

- · Visualize the impact of therapy and adjustments
- · Understand health goals and progress towards those goals
- Connect health devices and apps, including cellular and Bluetooth[®] glucose analyzers, scales and fitness trackers
- Receive feedback and coaching from the healthcare team in response to patient-generated data
- · Access EHR data, education, and advanced tools all in one place
